

## *Health Screening for Children with Special need*

Health screening benefits the overall health of the child. It is through checkups and tests that physicians can identify potential health problems. Many childhood health problems can be corrected before they become a health problem that the child carries into adulthood. Through health screening, healthy eating and regular physical activity you can help your child learn healthy living habits which can last a lifetime.

To promote advocacy on mental health and inclusiveness in the society, Star wellness and care foundation in association with Star Imaging and PathLab Pvt. Ltd conducted a health screening camp at UDAI Working Together Works a Charitable Trust for children and young adults with special needs, in Janakpuri, New Delhi on 18th August, 2021.

These students are specially abled. Free regular blood tests were conducted for the students. Regular blood tests are important for monitoring the efficacy and side effects of some medication, prescribed to the individuals with learning and mental disabilities.
