

World Hepatitis Day

World Hepatitis Day, observed on July 28 every year, aims to raise global awareness of hepatitis — a group of infectious diseases known as hepatitis A, B, C, D, and E — and encourage prevention, diagnosis and treatment. Hepatitis affects hundreds of millions of people worldwide, causing acute and chronic disease and killing close to 1.34 million people every year. Hepatitis can cause inflammation of the liver both acutely and chronically, and can kill a person. In some countries hepatitis B is the most common cause of cirrhosis and may also cause liver cancer. With a person dying every 30 seconds from hepatitis related illness we can't wait to act on viral hepatitis.

On this occasion, on 28 July, 2022 to support the Government of India's mission to make India free from Hepatitis B Virus, the Star Wellness and Care foundation organized an initiative to vaccinate around 32 employees of "Deepali Services" at Tilak Nagar.

This was followed by a counselling session was conducted to the beneficiaries about the undiagnosed pattern of Hepatitis-B, as it has no symptoms and how regular check-ups can prevent it formation.

“Deepali Services” is a company which provided Housekeeping Services to corporate and industries.
